

More1 aids, firmware.4.2
iPhone 13 mini IOS16.3
iPad generation 9 IOS16.3

I have my aids paired to both the iPhone and iPad and Bluetooth and enabled. I can stream from either the iPhone or iPad to my aids, but streaming wise the aids are only available to one device at a time. Control Panel wise I can control my aids from either the iPhone or iPad. I don't have the ON app installed, because when installed it causes connectivity issues when I am trying to stream from the TV Adapter. If my aids show connection to the iPhone and I start streaming say an audiobook from my iPad I will get a slight delay then my aids receive the streaming audiobook from the iPad. The aids say connected to the iPad until I force a transfer of the aids back to the iPhone by either starting a streaming process from my iPhone or if I momentarily disable the Bluetooth on the iPad.

How to setup this arrangement.

I forgot my aids from both my iPhone and iPad then I restarted both. I powered off my aids, I restarted my iPhone and iPad, opened settings on both, then accessibility, hearing devices, and powered up my aids, first I paired my aids to the iPhone, once completed I hit pair on the iPad at first it just thinks about it but will finally pair and you see all of the information about the aids. I have done this a couple of weeks to see if I can duplicate it. I have to say at first it doesn't look like the aids are going to pair to the iPad.

Next I made use of the following

Audio routing both call audio and media audio set to always hearing devices. This seem important for I haven't been able to get the streaming to work without these settings.

Control Nearby Devices enabled

Audio handoff enabled

Control on Lock Screen enabled

Disclaimer I haven't verified incoming calls. My family and friends know to message me.

I have my phone settings to give me voice notifications and read my messages to me. Also I get voice notifications for the few incoming calls.

On the iPhone I have play system sounds enabled

And I have Siri enabled to do certain commands from me like end calls, and reply to messages if I have my focus set for things like driving, which I rarely do because I have my phone paired to our vehicle entertainment system. I have a reminder to set my call auto to automatic when in the vehicle or my calls would go to my aids and not the entertainment system.
